How Sweden Can Use its EU Presidency to Build the Civilian Security Dimension of the Eastern Partnership

Michal Baranowski, Mikołaj Bronert, Maximilian Kaminski, and Elene Kintsurashvili

The EU’s Eastern Partnership (EaP) lacks a security dimension and this is an urgent reform need. In particular, the EU should become the leading provider of civilian security support in the EaP countries, particularly Ukraine. But significant weaknesses in this policy field inhibit its capability to do so.

Sweden’s long-term focus on the EaP, its experience in augmenting domestic cyber and hybrid resilience as well as in placing the civilian aspect at the heart of its national security, and its leading contribution to the EU’s Common Security and Defense Policy (CSDP) missions put it in a unique position to be a champion of the security dimension of the EaP during its presidency of the Council of the EU.

Sweden can do so by pushing for: a EU-NATO memorandum of understanding on the EaP; the provision of a rapid financing mechanism to assist EaP countries in nonmilitary defense; a more coordinated training, planning, and implementing process for CSDP missions between EU actors and the EaP countries; a more targeted approach towards EaP countries; and prioritization of deepening of cooperation with EaP countries in the domain of hybrid threats.
Introduction

Since its establishment over a decade ago, the European Union’s Eastern Partnership (EaP) evolved dynamically, resulting in mismatched outcomes given that one size did not fit all of the six partner countries. Progress has been clearest with the “Associated Trio” of Georgia, Moldova, and Ukraine, which have signed Association Agreements, including Deep and Comprehensive Free Trade Areas, with the EU. After Russia’s full invasion of Ukraine in February 2022, Kyiv applied for a fast-track EU membership, followed by Chisinau and Tbilisi. As a result, the EU granted Moldova and Ukraine candidate status and stated that Georgia had a “European perspective.”

There has been no similar progress in EU integration for the three other EaP countries. A combination of close ties with and constant pressure from Russia have prevented Armenia from moving forward successfully with its European agenda. There is no interest from Azerbaijan in advancing the negotiations on a new framework agreement with the EU. The dictatorial regime in Minsk suspended Belarus’s participation in the EaP in 2021.

Despite the achievements of the Associated Trio, the EaP lacks a security dimension.

Despite the achievements of the Associated Trio, the EaP lacks a security dimension. Given the war in Ukraine, developing this must now be the most important topic when it comes to reforming the EaP. And strong security as well as humanitarian and civilian support will be instrumental to Ukraine’s reconstruction and European integration once it has repelled Russia’s invasion.

Sweden was one of the early champions of the EaP and it is a trusted partner of countries in Eastern and Western Europe alike. This puts it in a unique position to push this part of the EaP agenda forward during its presidency of the Council of the EU in the first half of 2023. It is one of the largest bilateral donors to Eastern Europe, and it has shifted a large portion of its funds to become one of the largest donors of humanitarian and development aid to Ukraine. In December 2021, the Swedish government approved a strategy for reform cooperation with Eastern Europe for 2021-2027 with a budget of approximately €600 million. Since February 2022, Sweden has more than doubled its support to Ukraine in the military, humanitarian, and reconstruction fields, for reforms, and through financial guarantees and civilian operations.

Sweden’s experience of being highly integrated in Western political and defense structures while not being a NATO member offers a potential model that EaP countries could emulate in the long run in a best-case scenario. The country has been very active in EU missions and operations, including every military and civilian mission under the Common Security and Defense Policy (CSDP). Sweden was also instrumental in establishing the civilian component of the CSDP. Its security objectives at home have also been centered around civilian defense and preparedness, making an ideal actor to advance the discussion on this dimension of the EaP.

The EaP and the CSDP

The European Council declared in 2015 that the political, economic, and security stabilization of the EU’s eastern neighbors would be a priority, given that an unsecured neighborhood poses a threat to its security. It was thus decided to strengthen the security dimension of the EaP, linking it with the CSDP civilian tools.¹ The EU has worked within the scope of the CSDP and bilaterally to provide the six EaP countries support regarding hybrid threats and strengthening civil society, but the war in Ukraine has made clear that it needs to step up its security support. In June 2022, the European Parliament adopted a resolution on security in the EaP calling on the EU “to expand support mechanisms for the further participation of the EaP countries in CSDP civilian and military missions and operations.”²

The EU’s engagement in civilian crisis management and security beyond its borders is addressed predominantly through CSDP missions. Their goals are usually limited to reinforcing the police, the rule of law, and the civil adminis-
activities beyond the EU’s borders. The third pillar consists of the agencies of the Justice and Home Affairs Council (JHA)—which brings together the justice and home affairs ministers of all member states—that deal with hybrid interference externally. Among these, the European Border and Coast Guard Agency (Frontex) plays a growing role. Thus, the EU’s reaction to civilian, hybrid, and cyber threats is fragmented, and its institutional setting does not respond well to the growing domestic/external threat nexus.

Supporting Resilience in Ukraine
To enhance Ukraine’s resilience, as outlined in their 23rd summit joint statement in 2021, the EU committed to contributing to “countering cyber and hybrid threats in addition to tackling disinformation campaigns.” The country has been a target of Russian information warfare “from the onset of the ‘Euromaidan’ demonstrations” in 2013. It has experienced an increase in cyberattacks causing power cuts, damaging the internal networks of state institutions, and undermining crucial infrastructure. Given that electronic warfare has become the “backbone” of Russian military strategy, the EU has done a great deal to make Ukraine cyber-resilient. As a member of the EaP, Ukraine is a part of the Cybersecurity East Project, which aims at strengthening cybersecurity governance. In 2021, the EU established a Cyber Dialogue with Ukraine “to bolster cyber resilience and advance responsible state behaviour in cyberspace.” Under this project, an EaP delegation held a meeting with the European Union Agency for Cybersecurity in October 2022 to...
assess the country’s current cyber threat landscape. Since February 2022, the EU has contributed to Ukraine’s cyber resilience with €10 million for equipment, software, and other related support and €15 million to support resilient digital transformation. However, the majority of EU countries have not established bilateral relations with Ukraine’s military intelligence services, making the country’s fight against cyberattacks and hybrid threats less effective.

The EU is also contributing to Ukraine’s civilian security sector through its advisory mission (EUAM) established in 2014 after the Revolution of Dignity “to expedite [the country’s] sustainable reform.” As a civilian CSDP mission, EUAM’s mandate includes de-oligarchization, good governance, the rule of law, and the fight against corruption. The border assistance mission to Moldova and Ukraine (EUBAM) aims at promoting economic development and enhancing regional security.

The EU perceives both missions as successful but there are gaps in their mandates. There is a mismatch between Ukraine’s expectations and the mandates of the missions. This is clear in the case of the EUAM. First, Ukraine had repeatedly asked for a monitoring mission but instead received an advisory one. Second, as one study found, the country’s “institutions were excluded from the formulation of the mission’s mandate and only got to know that the mandate concerned them once the EUAM was already in place.” Third, Ukraine and the EU have had different views of which agencies belong to the security sector and thus that have to be reformed, which has created friction between the EUAM team and Ukrainian officials. When it comes to support for civilian security, the EUAM faces fundamental operational challenges. The sector is bureaucratic, affected by the strong presence of oligarchs, and characterized by an unclear division between the military and civilian sectors. Despite these challenges, however, it seems that with time the EUAM has been able to adjust to the different needs and difficulties, and helped Ukrainian people regain trust in the state.

**Hybrid and Cyber Threats**

The launch of the European Union Military Assistance Mission in support of Ukraine (EUMAM Ukraine) in October 2022 addressed the needs the country has been articulating since 2014, but its mandate lacks a clear hybrid and cyber dimension. The salience of hybrid and cyber threats has been underlined in numerous EU papers and communications, yet there are still no specific roadmaps or “mini-concepts” for solutions within CSDP missions and operations planning. Moreover, the EU Military Staff cannot provide or deploy any operational cyber capabilities, as these must be requested from the member states. Therefore, planning and operationalizing measures against hybrid and cyber threats is insufficient. Even at the training level, the courses provided by the European Security and Defense College, which teach strategic planning processes for civilian missions, do not focus much on cyber elements.

In fact, the EU’s institutional framework related to these matters is highly fragmented between the CSDP, the JHA, the European Council, and the European Commission. For example, there is no institutionalized process of JHA actors...
being involved in the planning of CSDP actions, missions, and operations. JHA staff are not integrated into mission personnel. CSDP staff have little knowledge of JHA activities and vice versa as there is a scarcity of crosscutting training for both sides, which results in them operating in silos. This concern is also shared by the European Council conclusions from December 2022, calling for “a renewed impetus towards the civilian Common Security and Defence Policy”. In this, the council said it will aim to strengthen the “internal-external security nexus through increased cooperation between civilian CSDP and Justice and Home Affairs.” The conclusions also call for strengthening resilience to hybrid and cyber threats.

These issues were noted in the November 2022 Joint Communication of the European Commission and the High Representative for Foreign Affairs and Security Policy on an EU Cyber Defense policy and an Action Plan on Military Mobility 2.0. The declaration states that “The EU will reinforce its coordination mechanisms among national and EU cyber defense players, to increase information exchange and cooperation between military and civilian cybersecurity communities, and further support military CSDP missions and operations.”

Hybrid threats and cyber resilience are central when it comes to the security of the EaP countries, which have been targets of Russian cyber warfare for some time. For example, Ukraine has long been the object of regular large-scale Russian cyberattacks threatening the stable operation of government information resources and critical infrastructure. According to the Security Service of Ukraine, between the beginning of the invasion in February 2022 and the first half of November, the Cybersecurity Department repelled over 3,500 cyberattacks on state agencies and critical infrastructure.

The EU has responded with financial support for the EaP countries to improve their cyber resilience, including through the Instrument contributing to Stability and Peace and the European Neighbourhood Instrument. With the EU’s assistance, all the EaP countries set up cybercrime units and increased their cooperation with Europol, which can be regarded as one of the achievements of civilian CSDP.

Despite the EU’s increased engagement, the capacity of the EaP states to successfully counter hybrid attacks on their own is limited.

Nevertheless, if the EU wants to play a greater role in combatting hybrid threats in the EaP countries, more institutionalized security cooperation should be established. For example, officials from Ukraine’s State Service of Special Communications and Information Protection’s cyber agency have stressed the importance of the country being given the status of ENISA Special Partner, which would make it easier for the country as candidate countries to bring domestic legislation in line with EU standards (the same would apply for Moldova). This would be beneficial to the EU as well, given that there is a lot it can learn from the experience of EaP countries when it comes to facing cyberattacks.

Despite the EU’s increased engagement, the capacity of the EaP states to successfully counter hybrid attacks on their own is limited. The reasons for this include a low level of awareness among the public, the use of outdated or non-licensed software, a lack of qualified staff in the national security services, and limited resources for cybersecurity projects.

Increased cooperation between EU and NATO in Eastern Europe and their growing commitment to its security environment is a positive development, but this can also cause problems of duplication and lack of synergy. For example, both are committed to improving Ukraine’s technical capabilities for resilience against hybrid and cyber threats. NATO does this through its Information and Communication Agency, the NATO Industry Cyber Partnership, and the NATO-Ukraine Trust Fund on Consolidation, Command, Control and Communication. \(^43\) The EU does it through the EU4Digital program\(^44\) or PESCO projects related to cyber and hybrid threats that are now also open to EaP countries. Both institutions target similar goals but they have not yet come to an agreement that would allow them to take full advantage of their respective capabilities and experience while avoiding duplication and ensuring the most effective division of work.

The recently concluded EU Integrated Resolve 2022 exercise and NATO’s parallel PACE 2022 Exercise intended to strengthen synergy between both entities. More importantly, Ukrainian troops took part in the latter, making it possible to properly assess needs and capabilities on both sides, based on real-life scenarios. \(^45\)

**Sweden’s Potential Role**

After Brexit, Sweden had to rethink its security and defense policy, which had for long been more closely aligned to that of the United Kingdom rather than to that of the EU institutions. Sweden recognized that there is insufficient political will among the EU member states for deepening joint military capabilities, \(^46\) and that this ambition has to be achieved through NATO. Its application for NATO membership was the final step in cementing Sweden’s commitment to the transatlantic alliance and the military obligations that come with it. Sweden has also reiterated that its military spending

steadily increasing its investments in civilian and military defense capabilities to match its ambitions.

Because of Russia’s aggression in Eastern Europe and the rise of hybrid threats, Sweden has since 2015 worked to increase the resilience of its society and infrastructure. The main institution guiding the efforts in civilian defense is the Civil Contingencies Agency (MSB).52 Its responsibilities range from civil protection and infrastructure resilience to crisis management and cybersecurity. The MSB’s works abroad too, usually under the umbrella of rescEU, a program created by the European Commission for civil protection and disaster management. Sweden’s cybersecurity efforts are coordinated through the EU Cybersecurity Competence Center and the National Coordination Centers in every EU member state.53 Sweden established a cybersecurity center in 2020 to improve coordination between its security agencies such as MSB, the armed forces, and other institutions.54

In 2018, Sweden appointed an ambassador and special Envoy for countering hybrid threats in the Ministry for Foreign Affairs.55 The minister’s main tasks include coordinating efforts at the national and international levels to counter them. To aid with this task, the Swedish research community has been providing policy advice on topics linked to hybrid threats, and it also plays an important role in raising awareness and supporting decision-making on these issues.56

All these efforts in civilian defense and countering hybrid threats are developed in line with Sweden’s “total defense” approach. This tries to involve the whole of society to strengthen resilience against major crises or to take measures to prevent them. In the past years, the government has taken steps to increase civilian defense and preparedness by developing security concepts in areas such as defense

Sweden is leading light in Europe when it comes to civilian defense and preparedness against hybrid threats.

Sweden is leading light in Europe when it comes to civilian defense and preparedness against hybrid threats. The new government that took office in 2022 made its ambitions in civilian defense clear by shifting responsibility for it from the Ministry of Justice to the Ministry of Defense, and by appointing a special minister for civilian defense.51 It also wants to increase the country’s resilience to hybrid threats and improve its cybersecurity competencies. Both are core areas in building up resilience and crisis management, which has been advocated by Sweden in the development of the EU’s Strategic Compass. Furthermore, Sweden has been

organization, cybersecurity, maintaining critical supply lines, and improving cooperation between the public and private sphere.\(^57\) By pooling resources from the public and private spheres, the strengths and weaknesses of Sweden's security system can be identified and addressed. However, in this “whole of society” approach, uncertainty about the responsibility of different security aspects can arise in the public and private sector alike due to the great number of national authorities involved. This can slow down the initial response to a crisis.\(^58\)

To sum up, since adopting its approach of total defense, Sweden has developed a successful framework that increases the resilience of its society and critical infrastructure. It is therefore well qualified to share valuable experience with the EaP countries and assistance for incorporating some elements of its total defense system to increase their civilian defense capabilities.

**Recommendations**

Despite the fact there is a significant need for building up the security dimension of the EaP, especially with regard to supporting Ukraine today, the potential for the EaP's evolution through the CSDP and wider civilian security is underused in the EU’s policies in the region. The recommendations below suggest ways forward, bearing in mind Sweden's assets and advantages in the context of its presidency of the Council of the EU.

**The EU and NATO should develop a memorandum of understanding on the EaP, and most importantly with regard to Ukraine.**

The war in Ukraine is yet another display of Russia's destabilizing role in the region, after its war with Georgia, its annexation of Crimea and military intervention in Donbas, and its role in the escalation in Nagorno-Karabakh. The invasion has clarified more than ever the nature of challenges shared by NATO and the EU. As these two institutions are heavily invested in the region, and especially in Ukraine, a clear division of labor between them is crucial to effectively ensure security in Eastern Europe and the South Caucasus. NATO's undisputed military role, sharing of best practices, and support for Ukraine and the EaP countries can be complemented by the EU’s established civilian force on the ground. New challenges in the hybrid and cyber fields can be better dealt with by a clear demarcation of tasks between the two institutions. Sweden is in a privileged position to serve as the moderator of a discussion that can lead to a clearer and more coherent EU-NATO collaboration in the EaP countries.

**The EU should provide a mechanism for EaP countries to quickly access funds to assist them in nonmilitary defense.**

The EaP countries need funds to strengthen their civilian defense, to increase the resilience of their critical infrastructure, and to improve their crisis management. They need to be able to access these funds fast and without too many bureaucratic hurdles. The European Peace Facility provides swift support in military and defense situations, and it covers costs for military CSDP missions. By extending this support to civilian missions, the EU can help the EaP countries significantly improve their defense capabilities from the ground up. Access to these funds could be tied to them reaching milestones in rule-of-law, anti-corruption, or judiciary reforms that also tie the EaP countries closer to the EU.

**There should be a more coordinated training, planning, and implementing process for CSDP missions between the EEAS, the JHA, EU member states, and EaP countries.**

Pre-seconded CSPD mission personnel should spend some time within EU agencies, primarily those related to the JHA. For instance, in the case of the EUAM Ukraine or the EUBAM, this could include Frontex and Europol, given that policing and border control are at the core of these missions’ activities. These practices would allow new members of mission staff to understand the nuances of the relationship between the CSDP and the JHA, and it would also enhance dissem-

---

57 Ibid.
inating best practices. As the member state that sends the largest numbers of seconded personnel to CSDP missions, Sweden is in a unique position to initiate the development of a CSDP-JHA cooperation handbook, drawing on their feedback. Such an initiative can easily be launched during Sweden’s EU Presidency.

The EU should establish a more targeted approach toward the EaP countries. Since its establishment, the EaP has evolved dynamically, which has resulted in uneven outcomes given that one approach did not fit all six countries. Progress in matters of EU integration has been clearest with Georgia, Moldova, and Ukraine, while there has been little success with Armenia, Azerbaijan, and Belarus. Sweden pushed for the creation of the EaP as a policy tool to support regional cooperation and to deepen relations between the EU and its eastern neighbors, and it has since supported efforts to ensure that the EaP is successful in achieving its goals. The EU should adopt a new approach to the EaP based on differentiation. Sweden can contribute to a more targeted approach to each EaP country by promoting in-depth consultations with each one, involving their governments and other stakeholders.

The EU should prioritize deepening cooperation with the EaP countries in the domain of hybrid threats. The EU should further strengthen its strategic dialogue on cybersecurity with the EaP countries. To do this, it should initiate intelligence sharing on cyber threats by offering to Georgia and Moldova cybersecurity dialogues like the ones it has with Ukraine and by organizing joint cyber exercises. The EU should adopt a new approach to the EaP based on differentiation. Sweden can contribute to a more targeted approach to each EaP country by promoting in-depth consultations with each one, involving their governments and other stakeholders.

The EU should prioritize deepening cooperation with the EaP countries in the domain of hybrid threats. The EU should further strengthen its strategic dialogue on cybersecurity with the EaP countries. To do this, it should initiate intelligence sharing on cyber threats by offering to Georgia and Moldova cybersecurity dialogues like the ones it has with Ukraine and by organizing joint cyber exercises. The EU should support committed EaP countries financially in developing effective national early-warning and early-response mechanisms to counter hybrid threats. Moreover, the EU should provide the necessary assistance to selected EaP countries to secure their critical infrastructure from hybrid threats. This is best done by strengthening the public and private spheres simultaneously. Sweden has been enhancing cooperation between its public and private sectors for some time now and can provide guidance the EaP countries for successfully doing so. Ukraine’s participation in the EU’s Integrated Resolve exercise was an important step forward, yet it is important to engage not only the country’s military but also its security services and agencies. Georgia and Moldova should also be invited to participate in the next EU’s hybrid and cyber security exercises.

Strengthening cooperation on hybrid threats between the EU and the EaP countries will be mutually beneficial. By gaining firsthand experience from these partners in countering hybrid threats, the EU can improve its crisis-response system.
As a non-partisan and independent research institution, The German Marshall Fund of the United States is committed to research integrity and transparency. About GMF
The German Marshall Fund of the United States (GMF) is a non-partisan policy organization committed to the idea that the United States and Europe are stronger together. GMF champions the principles of democracy, human rights, and international cooperation, which have served as the bedrock of peace and prosperity since the end of the Second World War, but are under increasing strain. GMF works on issues critical to transatlantic interests in the 21st century, including the future of democracy, security and defense, geopolitics and the rise of China, and technology and innovation. By drawing on and fostering a community of people with diverse life experiences and political perspectives, GMF pursues its mission by driving the policy debate through cutting edge analysis and convening, fortifying civil society, and cultivating the next generation of leaders on both sides of the Atlantic. Founded in 1972 through a gift from Germany as a tribute to the Marshall Plan, GMF is headquartered in Washington, DC, with offices in Berlin, Brussels, Ankara, Belgrade, Bucharest, Paris, and Warsaw.
